

Our new technical business areas

Since April 2022, we have continued the laser marking and laser wafer breaking business, previously managed by LASERline Teschauer GmbH since 1991, with the usual competence, reliability and quality.

We offer you laser inscription options on a wide variety of materials for industrial use, in the field of advertising materials and for private use. Please refer to our website for the individual options.

Together with our extensive network of cooperation partners, we have recently been able to offer you small series and prototype production (rapid prototyping) for various sizes, materials and processes in the field of 3D printing.

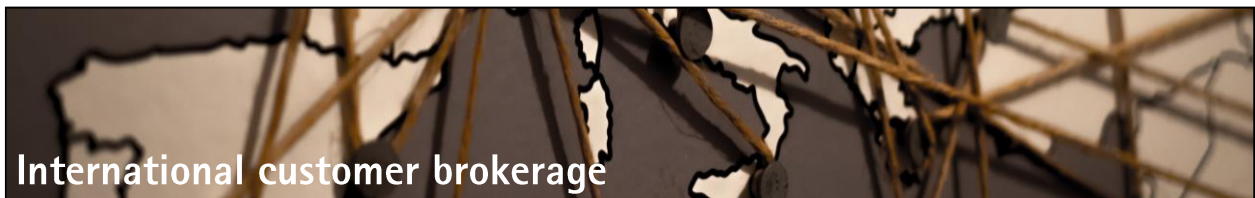

With the dye penetrant test according to DIN EN ISO 3452, the so-called "red-white test", we are happy to support you with our specialists at your site or in the premises of Qualitas GmbH.

You can use the dye penetrant test to identify defects on the surfaces of metallic and other non-porous materials. The dye penetrant test is a non-destructive material test.

Our new cooperative business areas

Benefit from our extensive network of cooperation partners in the field of funding advice for SMEs and energy efficiency advice as well.

In search for global production sites and processes, new opportunities will open up for you through the synergy effects of our network of international customers and cooperation partners.

Please refer to our website for more detailed information to all business areas:
